SCMS

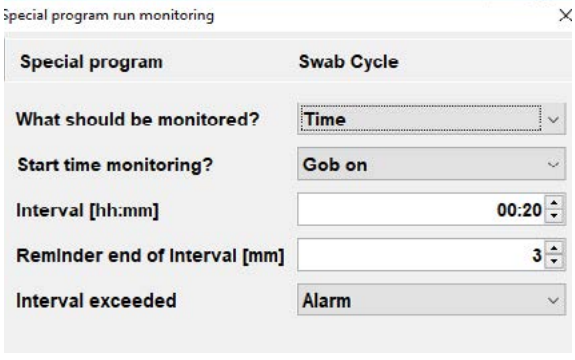

Swab Cycle Monitoring System for the FMT24S

Get a handy reminder of the next swab cycle

The SCMS monitors the swab cycles and provides visual and acoustic warnings when the next one is due. When an LED timer is connected to the FMT24S, the time until the next swab interval is displayed. You start or reset the counter by activating the special program.

Different job-dependent swab times are stored and managed centrally in the MCT database. The SCMS is shipped with a robust industrial LED display and the necessary FMT24S software upgrade.
